INDUSTRIAL AND SYSTEMS ENGINEERING

Office: 2143 Manufacturing Engineering Building 4815 Fourth St.; 313-577-3821
Chairperson: Leslie Monplaisir
http://www.engineering.wayne.edu/ise/index.php

Industrial Engineering is a broadly-based integrated field concerned with enabling complex systems to function effectively. Managing the inventory of a production facility, for example, involves issues of production and stocking policy, manufacturing equipment, human resources, customer demand, and supplier relationships. The industrial engineer must understand the interaction of the components of a system, and coordinate the flow of materials and information to effectively manage the operation. He/she plays an important role in defining information needs and developing strategies for improving decision making in existing systems. The skills of the industrial engineer, however, can be applied in more than just the traditional production environment. In the growing service sector of the economy including health care delivery, public safety, air transportation, energy, and banking issues of resource management, scheduling, quality of service, and systems design are of increasing importance.

Manufacturing Systems Engineering was traditionally involved in developing process capabilities to realize the output of design engineering. Today, design and manufacturing systems engineering is becoming reciprocally integrated and both groups work together in teams to assure the soundness of design and producibility of goods and services. The manufacturing systems engineer must have an understanding of the design process as well as special expertise in the knowledge and understanding of the production process, which is now computer-based and provides flexibility through numerical control. The manufacturing systems engineer is responsible for designing and implementing the cells and production lines which become the basic units of manufacturing. Increasingly, such production units are becoming parts of an integrated factory system, and are not simply islands of automation. The manufacturing systems engineer must understand the multi-layered control architecture of the integrated factory, and the computer-based technologies which enable it.

Engineering Management has grown in importance as today’s engineer must possess the necessary tools for effective technical management. Inherent in successful leadership is an understanding of the business functions of an organization, tools used in the decision-making process, and skills for efficient project management, among others. An effective engineering manager will utilize industrial engineering skills to develop strategies that improve the product development process, manage quality and productivity, and advance techniques in world-class manufacturing. More often, a business overview is critical to developing and improving these processes.

Systems Engineering is an interdisciplinary approach and means to enable the realization of successful systems. It focuses on defining customer needs and required functionality early in the development cycle, documenting requirements, then proceeding with design synthesis and system validation while considering the complete problem.

The bridge certificate program in Systems Engineering provides formal courses for working engineers and professionals to enhance their knowledge in the area of systems engineering. Coursework covers a broad range of methods, practices and tools in all aspects of this field. Students who complete this program have the option to continue into the M.S. program in Industrial Engineering or Engineering Management. Credits earned as part of the Bridge Graduate Certificate in Systems Engineering can be applied towards the M.S. degree requirements as long as they were completed with a minimum grade of ‘B’ and within six years of the completion date for the M.S. Applicants must have a Bachelor of Science degree in engineering.

Facilities: The Department maintains laboratories in systems simulation, computer-aided manufacturing, smart engineering systems, ergonomics, design, and concurrent engineering.

Master’s Degree Programs of this department offer the flexibility of full or part-time study. Most of the courses are offered in the evening, allowing students to continue full-time employment in local industries. Some program classes are offered at off-campus sites. Many of the graduate-level courses are also offered in the evening, allowing graduate students also to continue full-time employment in local industries. To further accommodate the working student population, several engineering courses are offered online (refer to the schedule of classes to determine availability).

All incoming M.S. students must demonstrate competency in undergraduate probability and statistics, through successful completion of BE 2100, or equivalent courses. If the student fails to show competency, he or she may be required to complete a pre-requisite course in probability and statistics.

AGUWA, CELESTINE C.: Ph.D., University of Pittsburgh; M.S., University of Massachusetts; B.Arch., University of Nigeria; Associate Professor (Research)
CHELST, KENNETH R.: Ph.D., Massachusetts Institute of Technology; M.S., New York University School of Engineering and Sciences; B.A., Yeshiva University; Professor
CHINNAM, RATNA BABU: Ph.D., Texas Tech University; B.S., Manipal Institute of Technology; Professor
DALKIRAN, EVRIM: Ph.D., Virginia Polytechnic Institute & State University; M.S., B.S., Bogazici University; Assistant Professor
ELLIS, R. DARIN: Ph.D., M.S., G.M.I., B.S.I.E., Pennsylvania State University; Professor
KIM, KYOUNG-YUN: Ph.D., University of Pittsburgh; M.S., B.S., Chonbuk National University; Associate Professor
MEJABI, OLUGBENGA: Ph.D., Lehigh University; M.Sc., University of Manchester Institute of Science and Technology; B.Eng, Ahmadu Bello University; Associate Professor
MONPLAISIR, LESLIE: Ph.D., University of Missouri-Rolla; M.S., University of Birmingham; Associate Professor and Chair
MURAT, ALPER: Ph.D., McGill University; M.S., B.S., Bogazici University; Associate Professor
RICKLI, JEREMY: Ph.D., Virginia Tech; M.S., B.S., Michigan Technological University; Assistant Professor
SINGH, NANUA: Ph.D., M.E., B.E., University of Rajasthan; Professor Emeritus
TREWN, JAYANT SINGH: Ph.D., M.B.A., Wayne State University; B.E., Madras University; Lecturer
VENKATACHALAM, SARAVANAN: Ph.D., M.S., Texas A&M University; B.E., PSG College of Technology; Assistant Professor
WASSERMAN, GARY: Ph.D., M.S., Georgia Institute of Technology; M.S., University of Miami; M.S., Massachusetts Institute of Technology; B.S., Rensselaer Polytechnic Institute; Associate Professor
YANG, KAI: Ph.D., M.S., University of Michigan; B.S., China Petroleum University; Professor
YANG, QINGYU: Ph.D., M.S., University of Iowa; B.S. University of Science and Technology of China; Assistant Professor

Industrial Engineering

IE 5100 Quantitative Physiology Cr. 4
The basic principles of human physiology presented from the engineering viewpoint. Bodily functions, their regulation and control discussed in quantitative terms and illustrated by mathematical models when feasible. Offered Winter.
Prerequisites: (BME 5005 with a minimum grade of C) OR (BME 2010 with a minimum grade of C)
Equivalent: BME 5010, CHE 5100, ECE 5100, ME 5100

IE 5780 Products Liability Introduction for Engineers Cr. 1
Application of engineering practice to minimize products liability exposure. Stages of a products liability lawsuit: how engineers may be involved at different stages of the process. Offered Yearly.
Restriction(s): Enrollment limited to students with a class of Applicant Masters, Candidate Masters or Senior; enrollment limited to students in the College of Engineering.
Equivalent: ME 5780

IE 5995 Special Topics in Industrial Engineering Cr. 1-4
Special subject matter in industrial engineering. Topics to be announced in Schedule of Classes. Offered Irregularly.

IE 6000 Digital Automation Cr. 4
Fundamentals of digital control and logic; integration and automation solution technologies (barcode systems, vision systems, etc.); data acquisition. Offered Spring/Summer.

IE 6005 Automotive Engineering Statistics Cr. 3
Introduction to probability and statistics for engineering students: analysis of random component in problems, understanding probability and statistics, opportunities for application, analysis of data using statistical software. Offered for graduate credit only. Offered Winter.
Restriction(s): Enrollment is limited to Graduate level students; enrollment limited to students in the College of Engineering.

IE 6180 Biomedical Instrumentation Cr. 4
Engineering principles of physiological measurements. Signal conditioning equipment, amplifiers, recorders and transducers. Recent advances. Offered Winter.
Prerequisites: ([BME 5010, BME 5020, and ECE 3300] OR [BMS 6550] OR [BMS 5550])
Equivalent: BME 6480, ECE 6180, ME 6180

IE 6210 Applied Engineering Statistics Cr. 4
Analysis of variability in engineering decision making; data analysis, probabilistic models, hypothesis testing, regression and analysis of variance. No credit after IE 4250. Offered Fall, Winter.
Prerequisite: BE 2100 with a minimum grade of C-

IE 6220 Value Engineering Cr. 4
Resource management; systematic approach to solving problems and making decisions; forcing latent capabilities to be applied to challenging assumptions; application of unbiased logic techniques to produce superior results. Offered Spring/Summer.

IE 6240 Quality Management Systems Cr. 4
Design of quality management systems. Topics include: QFD, quality planning, business operating systems, TQM, standards, and auditing. Quality management tools such as PDCA and root case analysis. Offered Winter.
Prerequisite: BE 2100 with a minimum grade of C-

IE 6270 Engineering Experimental Design Cr. 4
The design of engineering experiments for manufacturing process analysis, human factors experimentation, societal systems analysis and life testing; basic experimental design models, blocking, factorial experiments, nested designs, covariance analysis, response surface analysis, estimation of effects. Offered Fall.
Prerequisite: IE 6210 with a minimum grade of C

IE 6310 Lean Operations and Manufacturing Cr. 2
Fundamental theories and concepts in lean manufacturing, six-sigma, mistake proofing, problem solving, process management. Students develop competency in identifying causes and sources of waste in manufacturing, industrial, and business operations. Offered Fall, Winter.

IE 6405 Integrated Product Development Cr. 4
Product development process: product architectures, concurrent engineering. Integration of marketing, design, and manufacturing functions for product development. How such processes are designed to account for various manufacturing and other business constraints to ensure that customer needs are met. Offered Fall.
Restriction(s): Enrollment is limited to Graduate or Undergraduate level students; enrollment limited to students in the College of Engineering.
Equivalent: AET 5600, EVE 5600

IE 6420 Computer Aided Manufacturing and Lab Cr. 4
Prerequisite: IE 6415 with a minimum grade of C
IE 6425 Product Lifecycle Management and Sustainable Design Cr. 4
Introduction to modern principles, practices, and applications of PLM and sustainable design. Offered Winter.

IE 6430 Computer Simulation Methods Cr. 2
The application of discrete, continuous and combined simulation methods to the solution of a variety of production and service systems problems. Computer simulation and a term project involving an application are required. Offered Fall, Winter.
Prerequisite: IE 6310 (may be taken concurrently) with a minimum grade of C

IE 6442 Facilities Design and Materials Flow Cr. 2
Plant location theory, analysis of models of plant location. Models for determining plant size and time phasing. Design of manufacturing warehouse and material handling facilities. Use of analytical and computer-aided methods in the facilities design process. Offered Winter.

IE 6470 Stochastic System Modeling: Queuing and Simulation Cr. 2
Description of queuing systems; analytical solutions; discrete events systems; modeling framework and object models; terminating and non-terminating systems; statistical analysis; case studies. Offered Yearly.

IE 6490 Introduction to Systems Engineering in Design Cr. 2
Introduction to the engineering and analysis of systems with process focus. Offered Fall.
Restriction(s): Enrollment limited to students in the College of Engineering.

IE 6510 Information Systems for the Manufacturing Enterprise Cr. 2
Methods for information flow modeling. Information needs of global manufacturer: design, testing, manufacture, and delivery. Partnership relation to suppliers via information. Offered Fall.

IE 6520 Negotiating in an IE Environment Cr. 2
Analytic and interpersonal skills needed to negotiate effectively. Students integrate the analytic and interpersonal skills necessary to be an effective negotiator in a rapidly-changing technical environment. Offered for graduate credit only. Offered Biannually (Spr/Sum).
Restriction(s): Enrollment is limited to Graduate level students.

IE 6550 Deterministic Optimization Cr. 4
Introduction to philosophy of operations research. Formulation of linear program models and their solutions. Duality and sensitivity analysis. The transportation model. Introduction to probabilistic modeling and applications of queuing models. Network models decision theory. Offered for graduate credit only. Offered Fall, Winter.
Restriction(s): Enrollment is limited to Graduate level students.

IE 6610 Introduction to Six Sigma Cr. 4
For the working engineer who requires exposure to basic concepts of 6-Sigma and its work applications. Offered Winter, Spring/Summer.

IE 6840 Project Management Cr. 1-4
Principles of successful project management including: time and cost management, risk analysis, human resource management. Consideration of both operational and conceptual issues. Introduction to project management tools. Offered Winter.
Equivalent: MGT 6840

IE 6850 Manufacturing Strategies Cr. 2
Strategic approach to the management of manufacturing including: relationship to corporate strategy, operationalizing manufacturing concepts, impact of new technology and manufacturing concepts, impact of new technology and manufacturing as a competitive resource; case-studies approach. Offered Yearly.

IE 6991 Industrial Internship Cr. 1-3
Offered Fall, Winter.
Repeatable for 99 Credits

IE 7100 Mathematical Modeling in Impact Biomechanics Cr. 3-4
Review of models created for impact simulations. Regional impact simulation models. Human and dummy models subject to various restraint systems. Offered Winter.
Prerequisites: [IE 5100 and ME 3400] OR [BMS 6550] OR [BMS 5550]
Restriction(s): Enrollment is limited to Graduate level students.
Equivalent: BME 7100, ECE 7100, ME 7100

IE 7125 Human Factors Engineering Cr. 4
Current methods and topics in engineering research on human capabilities and limitations as a system component. Advanced analysis, modeling and design of human-centered systems. Offered Winter.
Prerequisite: BE 2100 with a minimum grade of C
Restriction(s): Enrollment is limited to Graduate level students.

IE 7210 Robust Design Cr. 4
Fundamental principles including role of variability, types of noise, and variability reduction strategies to increase product quality. Techniques such as: DOE, RSM, Taguchi, reliability estimation, and design for reliability. Offered Fall.
Prerequisite: IE 6210 with a minimum grade of C
Restriction(s): Enrollment is limited to Graduate level students.

IE 7250 Quality Engineering Cr. 4
Quality loss function; introduction to on-line and off-line quality control; product and process design optimization using Taguchi methods; fractional factorial designs using orthogonal arrays and linear graphs; robust design and signal to noise ratio. Offered Winter.
Prerequisite: IE 6210 with a minimum grade of C
Restriction(s): Enrollment is limited to Graduate level students.

IE 7270 Reliability Estimation Cr. 4
Reliability measures, failure distributions, reliability block diagrams, reliability estimation using exponential and Weibull distributions, sequential life testing and Bayesian reliability. Offered Fall.
Prerequisite: BE 2100 with a minimum grade of C
Restriction(s): Enrollment is limited to Graduate level students.

IE 7290 Quality and Productivity Management Cr. 4
Topics in product assurance management including: definition, history, philosophy of quality. Strategic elements of proactive quality, design for quality, process project control, reliability program management. Offered Yearly.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7315 Production Systems Cr. 4
Topics include: Fundamental theories and concepts in design and operation of production systems for manufacturing and service organizations, using concepts of inventory management, production planning, factory physics, production control and supply, chain management. Offered Winter.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7325 Supply Chain Management Cr. 4
Fundamental theories and concepts in design and management of supply chains. Theories and applications of mathematical models in SCM. Logistics, advanced strategic and tactical planning, extended enterprise integration. Offered Fall.
Restriction(s): Enrollment is limited to Graduate level students.
IE 7400 Capstone: Integrated Product Engineering Cr. 4
Integration of product development tools and theory. Industry-based project to develop hands-on experience with integrated project design and development. Application to robust product development methodologies. Offered Winter.
Prerequisite: IE 6400 with a minimum grade of C and IE 6410 with a minimum grade of C and IE 6420 with a minimum grade of C
Restriction(s): Enrollment is limited to Graduate level students.

IE 7410 Agile Systems for the Manufacturing Enterprise Cr. 2
Factors that help define the agility of a system; greater workforce autonomy and changes in training and production of technical personnel. Main elements of operations management. Offered Yearly.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7420 Flexible Manufacturing Systems Cr. 4
Analysis and design of flexible manufacturing systems. FMS control and communication architecture, FMS material handling architecture. Flexibility analysis. Computer-integrated manufacturing (CIM). Offered Fall.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7520 Optimization Methods Cr. 4
Restriction(s): Enrollment is limited to Graduate level students.

IE 7570 Deterministic System Models and Optimization Cr. 2
Methods for quantifying impact of specific constraints on overall performance of a system; use of journal articles on corporate use of these models. Offered Yearly.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7610 Fundamentals of Six Sigma Cr. 4
For the industrial engineer with a solid foundation in probability and statistics. Advanced knowledge to develop students into 6-Sigma consultants. No credit after IE 6610. Offered Winter.
Prerequisite: IE 6210 with a minimum grade of C
Restriction(s): Enrollment is limited to Graduate level students.

IE 7710 Introduction to Stochastic Processes Cr. 4
Fundamental understanding of various probability models from applied and theoretical perspectives. Topics include: probability review, Markov chains, Poisson process, continuous time Markov chains, queuing processes, and inventory applications. Offered Biannually.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7720 Engineering Risk and Decision Analysis Cr. 3-4
Structure, modeling and analysis of technical management decisions with emphasis on multiple objectives and trade-offs, and significant uncertainty. Explores barriers to rational decision making. Offered Biannually (Winter).
Restriction(s): Enrollment is limited to Graduate level students.

IE 7830 Management of Technology Change Cr. 2
In-depth treatment of development and implementation of advanced technology; special attention to interaction among technology work process, organization, human resources, and culture. Offered Fall.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7860 Intelligent Analytics Cr. 4
Computational intelligence methods used to solve complex analytics problems and develop decision support systems. Project-centric approach with the goal of developing several analytics solutions for real-world problems. Offered Fall.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7870 Quality Leadership and Process Improvements Cr. 2
Quality philosophies used as basis for quality process improvements; discussions and journal articles used to examine re-engineering, supply chain management, and the human side of quality; team project included. Offered Yearly.
Restriction(s): Enrollment is limited to Graduate level students.

IE 7990 Directed Study Cr. 1-6
Student selects some field of industrial engineering for advanced study and instruction. An outline approved by the instructor must be presented before registration in this course. Offered Every Term.
Restriction(s): Enrollment is limited to Graduate level students.
Repeatable for 6 Credits

IE 7995 Graduate Special Topics Cr. 1-4
Special subject matter in industrial engineering. Topics to be announced in Schedule of Classes. Offered Yearly.
Restriction(s): Enrollment is limited to Graduate level students.
Repeatable for 12 Credits

IE 7996 Research Cr. 1-6
Advanced design, investigation or experimental work. Offered Every Term.
Restriction(s): Enrollment is limited to Graduate level students.
Repeatable for 6 Credits

IE 7999 Engineering Management Leadership Project Cr. 1-6
Integration of knowledge from individual courses in M.S. engineering management curriculum. Team-oriented focus on major industrial problem. Offered Every Term.
Restriction(s): Enrollment limited to students with a class of Candidate Masters; enrollment is limited to Graduate level students.
Repeatable for 10 Credits

IE 8920 Decision and Risk Analysis for Research Cr. 3
Structure, modeling, and analysis of technical global management decisions with emphasis on multiple objectives and trade-offs, and significant uncertainty. Explores current trends in decision analysis research. Offered Biannually (Fall).
Restriction(s): Enrollment is limited to students with a major in Industrial Engineering GET or Industrial Engineering; enrollment limited to students in a Doctor of Philosophy degree.

IE 8930 Global Perspectives on Engineering Manufacturing and Management Cr. 2
Provides technical leaders with a system of frameworks to holistically understand and practically manage operations, to be technologically competitive in the global marketplace. Foundation for the Country Courses. Offered Winter.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.

IE 8935 Global Engineering and Manufacturing Management: Eastern Europe Cr. 1
Country course designed to provide broad coverage about Eastern Europe to an industrial engineering cohort with considerable business experience. Offered Fall.
Restriction(s): Enrollment is limited to Graduate level students.
IE 8936 Global Engineering and Manufacturing Management: South America and Mexico Cr. 1
Country course designed to provide broad coverage about South America and Mexico to an industrial engineering cohort with considerable business experience. Offered Fall.
Restriction(s): Enrollment is limited to Graduate level students.
IE 8941 From Idea through Launch: Products and Services I Cr. 2-3
Course comprised of twelve modules; the processes and progression from product or service innovation to development and launch. Offered Winter.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.
IE 8942 From Idea through Launch: Products and Services II Cr. 3
Course comprised of twelve modules; the processes and progression from product or service innovation to development and launch. Offered Fall.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.
IE 8943 From Launch through Sustainability: Products and Services I Cr. 2-4
From when the finished product hits the market to all the steps necessary to make the product sustainable. Offered Winter.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.
IE 8944 From Launch through Sustainability: Products and Services II Cr. 2-4
From when the finished product hits the market to all the steps necessary to make the product sustainable. Offered Fall.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.
IE 8950 Advanced Engineering Statistics Cr. 3
Skill development in model building, ANOVA, multiple regression, multivariate statistics, forecasting, and time series modeling. Offered Fall.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.
IE 8951 Research Design Cr. 3
Focus on qualitative research design and methods. Discussion of conceptual and practical facets of the process of framing a research question, up to development of an instrument for data collection. Offered Winter.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students; enrollment limited to students in the College of Engineering.
IE 8952 Research Methods Cr. 3
Focus on quantitative research design and methods. Topics such as purpose of statistical models, mathematical representation, interpretation, and methods are covered. Typical methods include: multiple regression, multivariate analysis (including survey data), and structural equation modeling. Offered Fall.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students; enrollment limited to students in the College of Engineering.
IE 8960 Literature Review Cr. 1-2
Development of library skills for identifying key authors, articles, journals, books, dissertations, case studies, conferences, web sites, professional associations, and NSF funding for a scholarly area of interest. Offered Spring/Summer.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to graduate level students; enrollment limited to students in the College of Engineering.
IE 8970 Leadership of the Global Technical Organization Cr. 3
Understanding the elements of leadership and the dynamics of leadership behavior; development of the skills necessary for leading in a global technical organization. Offered Winter.
Restriction(s): Enrollment is limited to students with a major, minor, or concentration in Industrial Engineering GET or Industrial Engineering GET; enrollment is limited to Graduate level students.
IE 8993 Graduate Seminar: Supply Chain Management Cr. 1
Research and development methods for Ph.D. students: literature review, identification of research opportunities, investigation of specific topics; assessment of major contributions and of gap between application and theory. Students present research findings and receive feedback. Offered Irregularly.
Restriction(s): Enrollment limited to students in the PhD in Engineering program; enrollment is limited to Graduate level students.
Repeatable for 99 Credits
IE 8995 Graduate Seminar Cr. 1
Research and development methods. Leading-edge research topics. Platform for student to present preliminary research findings and obtain feedback. Offered Fall, Winter.
Restriction(s): Enrollment limited to students in the PhD in Engineering program; enrollment is limited to Graduate level students.
Repeatable for 99 Credits
IE 8999 Master’s Thesis Research and Direction Cr. 1-8
Offered Every Term.
Restriction(s): Enrollment limited to students with a class of Candidate Masters; enrollment is limited to Graduate level students.
Repeatable for 8 Credits
IE 9990 Pre-Doctoral Candidacy Research Cr. 1-8
Research in preparation for doctoral dissertation. Offered Every Term.
Restriction(s): Enrollment is limited to Graduate level students.
Repeatable for 12 Credits
IE 9991 Doctoral Candidate Status I: Dissertation Research and Direction Cr. 7.5
Offered Every Term.
Restriction(s): Enrollment is limited to Graduate level students.
IE 9992 Doctoral Candidate Status II: Dissertation Research and Direction
Cr. 7.5
Offered Every Term.
Prerequisite: IE 9991 with a minimum grade of S
Restriction(s): Enrollment is limited to Graduate level students.

IE 9993 Doctoral Candidate Status III: Dissertation Research and Direction Cr. 7.5
Offered Every Term.
Prerequisite: IE 9992 with a minimum grade of S
Restriction(s): Enrollment is limited to Graduate level students.

IE 9994 Doctoral Candidate Status IV: Dissertation Research and Direction Cr. 7.5
Offered Every Term.
Prerequisite: IE 9993 with a minimum grade of S
Restriction(s): Enrollment is limited to Graduate level students.

IE 9995 Candidate Maintenance Status: Doctoral Dissertation Research and Direction Cr. 0
Offered Every Term.
Restriction(s): Enrollment is limited to Graduate level students.
Course Material Fees: $348.67
Repeatable for 0 Credits

Systems Engineering

SYE 5470 Creative Problem Solving in Design and Manufacturing Cr. 4
