Biomedical engineering (BME) is one of the fastest growing disciplines in engineering. This field has developed from the knowledge that engineering principles can be applied to better understand how the human body functions as well as the effect that outside forces have on it, whether they be diagnostic or traumatic. A biomedical engineer brings together traditional engineering principles with the life sciences in a completely integrated fashion. The result is an engineer who views the human body as a complex system, its diseases and injuries as breakdowns in that system, and medical interventions as design alternatives for the repair of the system. As the population ages and medical costs increase, biomedical engineers are required both to understand the mechanistic causes of injury and disease and to design and implement interventions to prevent and mitigate the suffering of individuals and to reduce the cost of medical care to society.

Wayne State has a long history with respect to biomedical engineering research. In 1939, faculty from the College of Engineering and School of Medicine began collaborating to investigate the mechanisms of injuries to the human body, and educational programs in the area of biomedical engineering have existed at Wayne State since the 1950s. They have developed from a few courses taken within traditional engineering departments to the graduate degree program in biomedical engineering, introduced in 1998. The Department of Biomedical Engineering, interdisciplinary between the College of Engineering and the School of Medicine, was established in 2002. Drawing upon the strengths of the biomedical engineering graduate program, the Department has established a new undergraduate program that accepted its first students for the Fall 2010 semester.

BIR, CYNTHIA: Ph.D., M.S., Wayne State University; M.S., University of Michigan; B.S.N., Nazareth College; Professor and Chair

CAVANAUGH, JOHN: M.D., B.S., Michigan State University; M.S., Wayne State University; Professor

JIN, XIN: Ph.D., Wayne State University; M.S. and B.S., Tsinghua University; Assistant Professor (Research)

KAVDIA, MAHENDRA: Ph.D., Oklahoma State University; MTech, Indian Institute of Technology; BTech, Indian Institute of Technology; Associate Professor

KLUEH, ULRIKE: Ph.D., M.S., University of Connecticut; B.A.Sc., University of Applied Sciences Mittelhessen; Associate Professor

KO, ZHIFENG: Ph.D., M.S., North Dakota State; M.S., Shanghai Tiedao University; B.S., Shanghai institute of Railway Technology; Associate Professor

LAM, MAI T.: Ph.D., M.S.E., B.S.E., University of Michigan; Assistant Professor

MEHRMOHAMMADI, MOHAMMAD: Ph.D., University of Texas at Austin; M.Sc., Illinois Institute of Technology; B.Sc., Sharif University of Technology; Assistant Professor

MUNDO, BRIAN: M.S., Wayne State University; B.E., University of Michigan; Lecturer

NASIRIAVANAKI, MOHAMMAD: Ph.D., M.A., University of Kent; M.Sc., University of Semnan; B.Sc., Isfahan University of Technology; Assistant Professor

REN, WEIPING: M.D., Shanghai Second Medical University; M.S. Shanghai; Associate Professor

SUNDARARAGHAVAN, HARINI: Ph.D., Rutgers, State University of New Jersey; B.S.E., University of Michigan; Associate Professor

YANG, KING-HAY: Ph.D., M.S., Wayne State University; B.S., National Taiwan University; Professor

Zhang, Liying: Ph.D. Wayne State University; M.S. and B.S. Shanghai Jiao Tong University; Associate Professor

• Biomedical Engineering (B.S.) (http://bulletins.wayne.edu/undergraduate/college-engineering/biomedical-engineering/biomedical-engineering-bs/)

BME 2050 Introduction to Anatomy and Physiology for Biomedical Engineers Cr. 4

Detailed study of the anatomical structure and physiological function of the major systems of the body: skeletal, nervous, muscular, endocrine, circulatory, respiratory, digestive, excretory, and reproductive. Relevant biomedical engineering applications related to these major systems of the body. Offered Yearly.

Prerequisite: BIO 1510 with a minimum grade of C-

Corequisite: BME 2920

BME 2910 Biomedical Engineering Design Lab III Cr. 1

Application of engineering principles to biomedical engineering problems through laboratory and design exercises. Third of a six-semester sequence; analysis of musculoskeletal forces biomechanics. Offered Fall.

Prerequisite: BE 1200 with a minimum grade of C- and BE 1300 with a minimum grade of C- and BE 1310 with a minimum grade of C- and BE 1500 with a minimum grade of C-

Restriction(s): Enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to Undergraduate level students.

Course Material Fees: $25

BME 2920 Biomedical Engineering Design Lab IV Cr. 1

Application of engineering principles to biomedical engineering problems through laboratory and design exercises involving tissue biomechanics. Introduction to finite element modeling. Fourth of a six-semester sequence. Offered Winter.

Prerequisite: BE 2100 (may be taken concurrently) with a minimum grade of C- and ME 2420 (may be taken concurrently) with a minimum grade of C-

Corequisite: BME 2050

Restriction(s): Enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to Undergraduate level students.

Course Material Fees: $25

Biomedical Engineering
BME 3470 Biomedical Signals and Systems Cr. 3
Mathematical, engineering and computer techniques for describing and analyzing biomedical signals, including ECG, EEG, EMG, blood pressure, and tomographic images. Offered Fall.
Prerequisites: BME 3910 with a minimum grade of C- (may be taken concurrently) and ECE 3300 with a minimum grade of C- (may be taken concurrently)
Restricions: Enrollment is limited to students in the College of Engineering. Enrollment limited to students in the following programs: BS in Biomedical Engineering, BS in Chemical Engineering, BS in Civil Engineering, BS in Electrical Engineering, BS in Industrial Engineering, BS in Mechanical Engineering; enrollment is limited to Undergraduate level students; enrollment limited to students in the College of Engineering.
Course Material Fees: $50

BME 3910 Biomedical Engineering Design Lab V Cr. 1
Application of engineering principles to biomedical engineering problems through laboratory and design exercises. Focus on measurement, analysis, modeling, and interaction with biomedical signals from living systems. Fifth of a six-semester sequence. Offered Fall.
Prerequisites: BME 3470 with a minimum grade of C- (may be taken concurrently), ENG 3050 with a minimum grade of C- (may be taken concurrently), BE 1500 with a minimum grade of C-; and MAT 2150 with a minimum grade of C-
Restricions: Enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to Undergraduate level students.
Course Material Fees: $25

BME 3920 Biomedical Engineering Design Lab VI Cr. 2
Application of engineering principles to biomedical engineering problems through laboratory and design exercises. Introduction to the capstone design process. Integration of the design process with the complete government regulation system for medical device design. Use of advanced CAE tools for analysis. Sixth of a six-semester sequence. Offered Winter.
Prerequisite: BME 3910 with a minimum grade of C-
Restrictions: Enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to Undergraduate level students.
Course Material Fees: $100

BME 4010 Engineering Physiology Laboratory Cr. 1
Measurement and analysis of physiological signals on living systems, with focus on neural, cardiovascular, respiratory and muscular systems. Includes a student-designed experiment on a physiological system. Offered Winter.
Prerequisites: BME 2050 with a minimum grade of C-
Restrictions: Enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to Undergraduate level students.
Course Material Fees: $30

BME 4210 Introduction to Biomechanics Cr. 3
Broad introduction to the application of mechanical engineering principles to biomedical engineering, including motion analysis, injury and forensic biomechanics, cardiovascular and pulmonary mechanics, and design of implants with mechanical functions. Offered Winter.
Prerequisite: ME 2420 with a minimum grade of C-
Restrictions: Enrollment limited to students in the following programs: BS in Biomedical Engineering, BS in Chemical Engineering, BS in Civil Engineering, BS in Electrical Engineering, BS in Industrial Engineering, BS in Mechanical Engineering; enrollment is limited to Undergraduate level students; enrollment limited to students in the College of Engineering.

BME 4310 Introduction to Biomaterials Cr. 3
Broad introduction to the field of biomaterials and its application to tissue engineering, implant design, controlled drug delivery, and designer materials for therapeutic use. Offered Winter.
Prerequisite: ME 2420 with a minimum grade of C-

BME 4410 Introduction to Biomedical Instrumentation Cr. 3
Broad introduction to the use and design of instrumentation for biomedical applications, in both clinical and research use; includes filtering techniques, safety issues, and special concerns for implanted and external systems. Offered Winter.
Prerequisites: BME 3470 with a minimum grade of C- and ECE 3300 with a minimum grade of C-
Restrictions: Enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to students in the following programs: BS in Biomedical Engineering, BS in Chemical Engineering, BS in Civil Engineering, BS in Electrical Engineering, BS in Industrial Engineering, BS in Mechanical Engineering; enrollment is limited to Undergraduate level students; enrollment limited to students in the College of Engineering.
Course Material Fees: $25

BME 4910 Biomedical Engineering Capstone Design I Cr. 3
Satisfies General Education Requirement: Writing Intensive Competency
First in a two-semester sequence during which student teams develop a design to address a biomedical engineering challenge; includes discussions with clinical faculty, analysis of current solutions, and finalization of conceptual design. Offered Fall.
Prerequisite: BME 3920 with a minimum grade of C-
Restrictions: Enrollment limited to students with a class of Junior or Senior; enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors.
Course Material Fees: $50

BME 4920 Biomedical Engineering Capstone Design II Cr. 3
Second of a two-semester sequence. Students develop and test a prototype of their biomedical engineering design; culminates in a public design expo to exhibit student designs. Offered Winter.
Prerequisite: BME 4910 with a minimum grade of C-
Restrictions: Enrollment limited to students with a class of Senior; enrollment is limited to students with a major in Biomedical Engineering or Biomedical Engg Honors; enrollment is limited to Undergraduate level students.
Course Material Fees: $50

BME 5010 Quantitative Physiology Cr. 4
Basic principles of human physiology presented from the engineering perspective. Bodily functions, their regulation and control discussed in quantitative terms and illustrated by mathematical models where feasible. Offered Fall, Winter.
Equivalent: CHE 5100, ECE 5100, ME 5100

BME 5020 Computer and Mathematical Applications in Biomedical Engineering Cr. 4
BME 5040 Fundamentals of Engineering Analysis Cr. 2
Intended to train biomedical engineering students, who have no engineering background, with fundamental principles of engineering and basics of an engineering programming language. It includes Matlab programming language and basics of engineering statics, dynamics, strength of materials, and electrical circuits. Offered Fall.

BME 5070 Anatomy for Engineers Cr. 4
A cadaver based anatomy course for undergraduate students and MS-level students in biomedical engineering. This hands-on course is intended to give the students directed experience of the study of human anatomy in relation to engineering principles. The histological study of tissues in relation to mechanical function of the organism is included in this study. Offered Fall.
Prerequisites: BME 2050 with a minimum grade of C-
Restriction(s): Enrollment is limited to Graduate or Undergraduate level students.

Course Material Fees: $225

BME 5130 Vehicle Safety Engineering Cr. 4
Role of vehicle in road safety, occupation and pedestrian injury mechanisms, measures of vehicle safety performance, driver behavior and vehicle interface. Use of new technology to improve vehicle safety. Offered Spring/Summer.

BME 5210 Musculoskeletal Biomechanics Cr. 4
Structure and properties of the major tissue components of the musculoskeletal system and evaluation of how tissues combine to provide support and motion to the body. Offered Fall.
Prerequisite: BME 5010 with a minimum grade of B-
Equivalent: ME 5160

BME 5220 Cellular and Tissue Biomechanics Cr. 3
Introduces biomechanics on the cellular to the tissue level. We will be studying mediators of cell mechanics such as the cytoskeleton, extracellular matrix and receptor-ligand interactions. Topics include cell adhesion, cell motility, and hemodynamics. Understanding of these topics will lend to discussion of translation of these forces up to the tissue level and subsequent tissue function. Offered Fall.
Prerequisites: MAT 2010 with a minimum grade of C- and MAT 2020 with a minimum grade of C-

BME 5310 Device and Drug Approval and the FDA Cr. 3
Government regulations and industrial procedures that lead to device/ drug approval. Offered Spring/Summer.

BME 5350 Regenerative Biology and Medicine for Biomedical Engineers Cr. 4
Introduces students specializing in biomedical engineering and premedical students to the conceptual and methodological principles of modern regenerative biology and medicine. Includes a review of research methods and achievements in this field and the translational applications of regenerative biology to tissue engineering and the development of regenerative therapies. Offered Intermittently.

BME 5360 Histology and Embryology Cr. 4
Examines the normal structure and development of human tissues and organisms and the applications of this knowledge to biomedical engineering. Working with microscopes, students will study the molecular and cellular characteristics of different tissues and the lab procedures used for the analysis of tissue specimens. Particular attention is focused on technical principles of tissue engineering of human organs in experimental and clinical settings. Offered Intermittently.

BME 5370 Introduction to Biomaterials Cr. 4
Introduction to study of both biological materials (bone, muscle, etc.) and materials for medical applications. Topics include tissue properties and effects of pathology, biocompatibility, and design considerations. Offered Winter.
Prerequisites: BME 5010 with a minimum grade of C- (may be taken concurrently)
Equivalent: ME 5180

BME 5380 Biocompatibility Cr. 4
Wound healing and the tissue response to foreign materials. The organization, activation, and mechanisms of the immune system. Bioactive materials and the molecular basis for surface recognition and masking. Offered Intermittently.
Prerequisite: BME 5010 with a minimum grade of C or BMS 6550 with a minimum grade of C
Equivalent: MSE 5385

BME 5425 Robotic Systems I Cr. 4
Introduction to robot kinematics and control. Computational algorithms for robot movement, sensor fusion, and intelligent behavior, which are needed to build a system that performs actions and interacts with its environment. Offered Fall.
Prerequisites: BE 2550 with a minimum grade of C, BE 1500 with a minimum grade of C, BME 5020 with a minimum grade of C, or ECE 3040 with a minimum grade of C-
Equivalent: ECE 5425

BME 5450 Microscopic Analysis: Methods & Instrumentation Cr. 4
Provides the students specializing in biomedical engineering with a basis for understanding the modern methods of microscopic analysis and the design of different types of instrumentation used for microscopic analysis and imaging. Offered Winter.
Prerequisites: BME 2050 with a minimum grade of C-

BME 5460 Lasers for Medical Applications Cr. 3
Summarizes the wealth of recent research on the principles, technologies and application of lasers in diagnostics, therapy and surgery. Includes an overview of optics, optical components used in a typical laser, key principles of lasers and radiation interactions with tissue. The respective types of the laser (solid state, gas, dye, and semiconductor) are reviewed to provide an understanding of the wide diversity, and therefore, the large possible choice of these devices for a specific diagnosis, treatment, or surgery. Offered Winter.
Equivalent: ME 5465, PHY 5460

BME 5990 Directed Study Cr. 1-4
Independent projects on subjects in the field of biomedical engineering. Offered Every Term.
Repeatable for 4 Credits

BME 5995 Special Topics in Biomedical Engineering I Cr. 1-4
Topics as announced in Schedule of Classes. Offered Intermittently.
Repeatable for 12 Credits

BME 6130 Accident Reconstruction Cr. 3
Passenger car and light truck behavior in collisions; recognition of roadway markings and vehicle damage used to analyze vehicle accidents and to use that evidence to reconstruct driver, vehicle and occupant dynamics at the time of the collision. Offered Spring/Summer.

BME 6470 Smart Sensor Technology I: Design Cr. 4
Introduction to various types of sensors and the design of basic analog VLSI circuit building blocks. Offered Winter.
Equivalent: ECE 6570, PHY 6570
BME 6480 Biomedical Instrumentation Cr. 4
Engineering principles of physiological measurements, signal conditioning equipment, amplifiers, recorders and transducers. Recent advances in instrumentation. Offered Winter.
Prerequisites: BME 5020 with a minimum grade of B- and ECE 3300 with a minimum grade of C-
Equivalent: ECE 6180, ME 6180

BME 6991 Internship in Industry Cr. 1-4
Industrial internship in biomedical engineering. Offered Every Term.
Repeatable for 4 Credits
