HEALTH ECONOMICS MINOR

The Health Economics minor explores the economic forces impacting the health status of individuals. These forces include the health care sector consisting of physician and other provider services, hospital and health facilities, pharmaceutical drugs, medical technology and innovation, health insurance, and government programs. Other economic forces impacting health such as poverty and discrimination are also examined.

A minor in health economics requires the completion of the following coursework. A grade of C or better is required in all courses counted toward the minor.

Code	Title	Credits
